

WRITING UNIT 4

First of all, we are in the year 2022, let us think about what health technology there will be in the year 2050. It should be possible for them to invent an ice cabinet to stay alive for a long time.

Next topic, scientists will be able to put our memory in other people and thus be able to exist much longer. However, that will cause people to be sacrificed for this experiment and lose their memory.

In addition, in the future it is also possible that they will invent a way to save the memory in a device and transplant it to another person. At that time, our memories will not die. Also, they will find a way to cure cancer. A way of seeing things, is the way of advancing in the times of technology.

Finally, my opinion is that wars have always given a new knowledge of technology and it has always advanced compared to the previous year, we should be able to see what will happen in the future.
